

FOR IMMEDIATE RELEASE

Line of Fire, LLC Announces New Product Developments Increase Safety and Survivability for Military, Law Enforcement and Emergency Services Personnel

Line of Fire, LLC is pleased to announce the launch of its premium line of law enforcement and military products, designed to increase safety and survivability, at the SHOT Show in Las Vegas, Nevada on Jan. 19 – 22, 2010

The Line of Fire product lineup comprises the latest advancements from industry leaders in the fields of military and law enforcement training and product development who, in conjunction with top designers from key tactical product manufacturers, have implemented significant changes to several product lines including:

- Gripping Systems
- Weapons Slings
- Personal Protective Equipment for Reality Based Training
- Gun Cases

Gripping Systems

TEGS™, or Technologically Enhanced Gripping Systems, will ultimately change the way military, law enforcement and emergency services personnel directly utilize the essential tools of their trade. Described as “a rail system for your hand”, Line of Fire’s proprietary TEGS™ system provides gripping capabilities previously unattainable using conventional gripping media. TEGS™ utilizes micro-replication technology where thousands of microscopic interlocking fingers are present in each square inch of wear-resistant fabric. When integrated into the gripping surfaces of a glove and also applied to the gripping surface of whichever items the user is attempting to hold onto, these tiny TEGS™ fingers provide unparalleled non-adhering gripping capabilities whether the surface is dry, wet, dusty, dirty, muddy, bloody, sooty, sweaty or oily. Users who need to stay connected to the tools of their trade, be it weapon grips, magazines, ladders, hose nozzles, breaching tools, litters, vehicle surfaces, etc., will find that TEGS™ provides unmatched performance.

Line of Fire’s introductory glove line features the TEGS™ system and includes three different glove styles designed to address various tactical requirements. The first offerings in the Line of Fire glove line include:

- STRYKER
- POINTMAN and POINTMAN LE
- FLASHOVER

The STRYKER glove is a heavy-duty operator's glove featuring durable Keprtec Kevlar® on the back of the hand with supple goatskin and TEGS™ on the touch surfaces.

The POINTMAN and POINTMAN LE gloves are designed as a multipurpose glove when ultimate dexterity is required. Utilizing NOMEX® on the back of hand surfaces for the military version and ribbed nylon on the back of the hand surfaces for the law enforcement version allows users to choose their desired level of threat protection. The FLASHOVER glove is similar to a conventional flight glove utilizing a durable NOMEX® with the added features of the TEGS™ system on the touch surfaces and leather on the back of the hand. All glove styles feature flexible, polyurethane guards for added knuckle protection while permitting exceptional flexibility and comfort.

Weapon sling

The 3-2-1 sling kit is the only sling an operator will ever need. Best described as a convertible, this sling quickly changes to meet the tactical requirements of each unique mission. It quickly converts from a single point, to a two point or three point sling. The included attachments come in their own carrying case to permit users to easily store and organize the various attachments within their gun case and allow the user to mount the sling on virtually any long gun without tools or any modification to the weapon.

Personal Protective Equipment

Line of Fire manufactures high quality personal protective equipment (PPE) for students and role players who participate in Reality Based Training (RBT) and man-on-man tactical engagement simulations. With a history of being the manufacturer of record for the existing top-of-the-line PPE products, Line of Fire has chosen to team with experts in the RBT field to develop a new line of protective equipment designed to address the needs and concerns of modern trainers who for years have had to rely on products taken from the recreational paintball community. This new line of PPE has been redesigned from the ground up, by trainers for trainers, and includes essential protection for head and neck, hand, groin protection and torso coverage.

Gun Cases

Line of Fire will also unveil its new line of long gun cases to include a conventional soft case and a hybrid molded/soft sided case.
